# Social and economic conditions

## Education

The proportion of people in the Devonport LGA who have completed Year 12 and above is less than the proportion for Tasmania overall.

PER CENT OF ELIGIBLE POPULATION WHO HAVE COMPLETED YEAR 12 AND ABOVE

Higher education levels are associated with better health outcomes.

## Unemployment rates

The rate of people in the Devonport LGA who are unemployed is greater than the rate in Tasmania overall.

## Median weekly income

Weekly income per household is less in the Devonport LGA than in the rest of Tasmania.

## Motor vehicles

Ninety-one percent (91%) of households in the Devonport LGA have one or more motor vehicles.

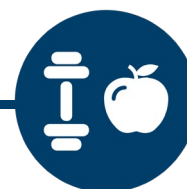

## Home ownership

The number of people in the Devonport LGA who own their homes outright is less than for the rest of Tasmania.

	Devonport	Tasmania
Owned outright	35%	37%
Owned with mortgage	31%	33%
Rented	32%	26%

# Healthy living

## Self-reported health

In 2022, thirty-five per cent (35%) of Devonport residents rated their health as “excellent” or “very good”. This is lower than the rate for Tasmania overall.

### ADULTS REPORTING THEIR OWN HEALTH AS ‘EXCELLENT’ OR ‘VERY GOOD’

How people feel about their own health, their state of mind and their life in general is a common measure of health.  
(Australia’s Health 2018. AIHW)

## Risk factors

Risk factors are conditions or behaviours that make it more likely people will get a chronic condition or health problem.

	Derwent Valley	Tasmania
<b>Overweight/obese body mass index (BMI)</b>	63%	62%
<b>Current smoker</b>	17%	15%
<b>Daily/occasional vaping</b>	4%	3%
<b>Single occasion risky drinking (&gt;4 alcoholic standard drinks)*</b>	38%	37%
<b>Insufficient moderate/vigorous activity<sup>+</sup></b>	25%	24%
<b>Did not meet recommended daily vegetable intake<sup>^</sup></b>	90%	91%
<b>Did not meet recommended daily fruit intake<sup>^</sup></b>	56%	61%

In the Devonport LGA, around 17% of people aged 18 years and over, are daily and current smokers, which is higher than the rate for Tasmania.

# Healthy living

## Psychological distress

More adults in the Devonport LGA are likely to experience high or very high levels of psychological distress compared with Tasmania overall.

### PEOPLE WITH HIGH OR VERY HIGH LEVELS OF PSYCHOLOGICAL DISTRESS

Psychological distress is a term used to describe unpleasant feelings or emotions that can influence how we function in daily life.

## Health care

### Immunisations

Ninety-six percent (96%) of children in the Devonport LGA are fully immunised by the age of five, which is higher than the rate for Tasmania.

### GP and emergency department encounters

In 2022, 84% of people from the Devonport LGA reported they had visited a general practitioner for their own health in the previous twelve months\*.

On average each year during 2020-2022, 4,598 individuals from the Devonport LGA visited an emergency department (171 people per 1,000 population<sup>^</sup>), with 12,285 ED presentations per year (456 ED presentations per 1,000 population<sup>^</sup>).

<sup>^</sup>Estimated population for June 2022=26,937

Sources: Psychological distress: Tasmanian Population Health Survey 2022 Local Government Areas (LGA) Supplementary Data Tables  
Immunisations: Primary Health Information Development Unit, Social Health Atlas of Australia: Local Government Areas; Compiled based on data provided by Australian Childhood Immunisation Register, Medicare Australia, 2021

GP encounters: Primary Health Information Network (PHIN) dataset (General Practice dataset), Analysed by Primary Health Tasmania; accessed October 2022

Emergency department encounters: Department of Health and Human Services, Health Central Data Warehouse, Tasmania. Analysed by Primary Health Tasmania; accessed November 2023

\*Individual totals may be higher due to patients potentially visiting more than one practice outside an LGA area or possible de-identification linkage errors from patient administration extraction software.

# Health outcomes

## Public hospital admissions

During the five years from 2018-19 to 2022-23 there were 50,478 admissions to Tasmanian public hospitals from the Devonport LGA area, with 22,637 overnight stays.

### NUMBER OF PUBLIC HOSPITAL ADMISSIONS BY AGE GROUP AND GENDER 2018-19 TO 2022-23

TOP 10 PRIMARY HOSPITAL DIAGNOSIS* <sup>^</sup>	TOP 10 CHARLSON COMORBIDITIES <sup>^^</sup>	TOP 10 POTENTIALLY PREVENTABLE HOSPITALISATIONS
Care involving dialysis	Renal disease	Cellulitis
Other cataract	Any malignancy, including lymphoma and leukaemia except malignant neoplasm of skin	Chronic obstructive pulmonary disease (COPD)
Live born infants according to place of birth	Chronic pulmonary disease	Urinary tract infections
Pain in throat and chest	Myocardial infarction	Congestive heart failure
Abdominal and pelvic pain	Cerebrovascular disease	Diabetes complications
Single spontaneous delivery	Congestive heart failure	Dental conditions
Other symptoms and signs involving the digestive system and abdomen	Metastatic tumour	Iron deficiency anaemia
Other chronic obstructive pulmonary disease	Diabetes with chronic complication	Type 2 diabetes
Acute myocardial infarction	Diabetes without chronic complication	Convulsions epilepsy
Pneumonia, organism unspecified	Dementia	Ear, nose and throat infections

\*Excludes diagnoses coded as “persons encountering health services in other circumstances” and “other medical care” which cover a wide range of diverse categories and are as such less useful in understanding reasons for hospitalisations.

# Health outcomes

^The *primary hospital diagnosis* is the diagnosis established after study (for example, at the completion of the episode of care) to be chiefly responsible for causing the episode of admitted patient care. It is essentially the main reason someone needed to be admitted to hospital.

^^Patients admitted to hospital often have other comorbid conditions, which may or may not be related to their diagnosis. *The Charlson Comorbidities Index* classifies 17 comorbid conditions which may influence mortality risk.

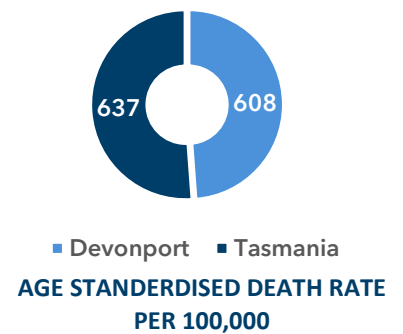

## Causes of death

During 2017-2021 coronary heart disease (12%), dementia including Alzheimer disease (7%), chronic obstructive pulmonary disease (6%), lung cancer (5%), and cerebrovascular disease (4%), were the leading causes of the 1,247 deaths in the Devonport LGA area. The age standardised death rate in 2021 was 607.9 per 100,000 compared with the overall age standardised rate of 636.7 for Tasmania.
